Build and run your web spiders

Terminal

```
$ pip install scrapy
$ cat > myspider.py <<EOF
import scrapy

class BlogSpider(scrapy.Spider):
    name = 'blogspider'
    start_urls = ['https://blog.scrapinghub.com']

    def parse(self, response):
        for title in response.css('.post-header>h2'):
            yield {'title': title.css('a ::text').get()}

        for next_page in response.css('a.next-posts-link'):
            yield response.follow(next_page, self.parse)
EOF
$ scrapy runspider myspider.py
```

Deploy them to Scrapy Cloud

or use Scrapyd to host the spiders on your own server

Terminal

```
$ pip install shub
$ shub login
Insert your Scrapinghub API Key: <API_KEY>

# Deploy the spider to Scrapy Cloud
$ shub deploy

# Schedule the spider for execution
$ shub schedule blogspider
Spider blogspider scheduled, watch it running here:
https://app.scrapinghub.com/p/26731/job/1/8

# Retrieve the scraped data
$ shub items 26731/1/8
{"title": "Improved Frontera: Web Crawling at Scale with Python 3 Support"}
 {"title": "How to Crawl the Web Politely with Scrapy"}
